Word Embedding

Continuous bag-of-words (CBOW) vs Skip-Gram Models

Continuous bag-of-words model:
predicts the middle word based on surrounding context words. The context consists of a few words before and after the current (middle) word. This architecture is called a bag-of-words model as the order of words in the context is not important.

Continuous skip-gram model:
predicts words within a certain range before and after the current word in the same sentence.

a bag-of-words model predicts a word given the neighboring context, a skip-gram model predicts the context (or neighbors) of a word, given the word itself.
