Effect of Overfitting on model parameter "W"

Training Data

Perfect Data
Y follows x1

	X1	X2	X3	X4	X5	X6	X7	X8
X1	1	2	3	4	8	9	10	11
X2	1	3	5	6	16	7	5	3
y	2	4	6	8	16	18	20	22

X5 is Outlier

	X1	X2	X3	X4	X5	X6	X7	X8
X1	1	2	3	4	8	9	10	30
X2	1	3	5	6	16	7	5	3
y	2	4	6	8	16	18	20	22

X5 is Outlier

	X1	X2	X3	X4	X5	X6	X7	X8
X1	1	2	3	4	8	9	10	60
X2	1	3	5	6	16	7	5	3
y	2	4	6	8	16	18	20	22

Test Data

	Test1	Test2	Test3
X1	30	40	50
X2	15	20	25
y	60	80	100

Again
Y follows x1

What will be the effect of X8 Outlier values on the trained model ???
